Setting up the Database

1. Follow up to slide 23 to setup your MySQL database (Take note of your password) [Essentially, have a server running on localhost port 3306]
2. In the `DatabaseConnection.java` class, line 17, put your password to connect to your database as the value of the `PASSWORD` variable
3. Copy all the lines in `garden_thyme.sql` and paste them into a new q
4. uery in MySQL (or just open the file in MySQL) and run the query
5. You are now ready to proceed to the next phase

Running the app

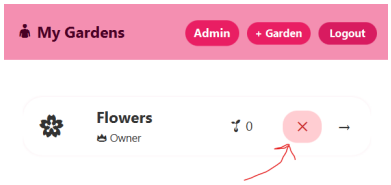

1. Open the project in your IDE (ex: IntelliJ)
2. Make sure to configure your project to the path of your javaFX module
3. Select the `Application.java` class (path: `com/gardenthyme/gui/Application.java`) and Run it

Logging in/Signing up

Login and signup is simple and intuitive from the startup page when you first run the application. To switch between the two pages click the 'Don't have an Account?' or 'Already have an Account?' links at the top of the page. To create an **admin** account, select `'Admin'` from the `Account Type` dropdown. To log out of an account, click the 'logout' button found on the `My Gardens` page. (If in a garden, you can return to the `My Gardens` page by clicking the profile icon in the top right)

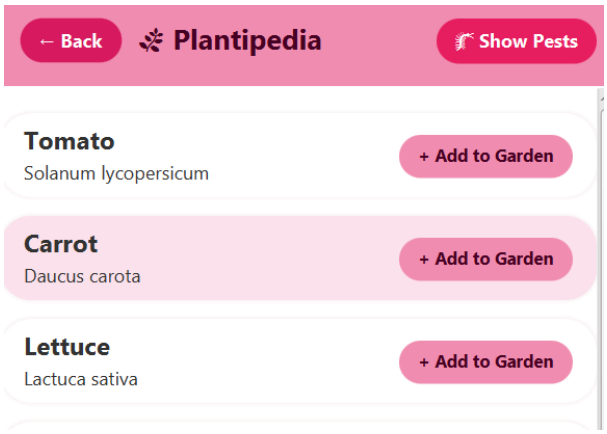

Gardening

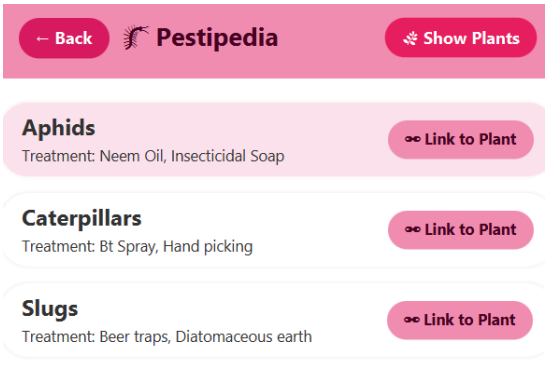

Create a garden with the `+Garden` button at the top of the `My Gardens` page.
Delete a garden with the `x` button on the garden card (tooltip will say 'Delete Garden')

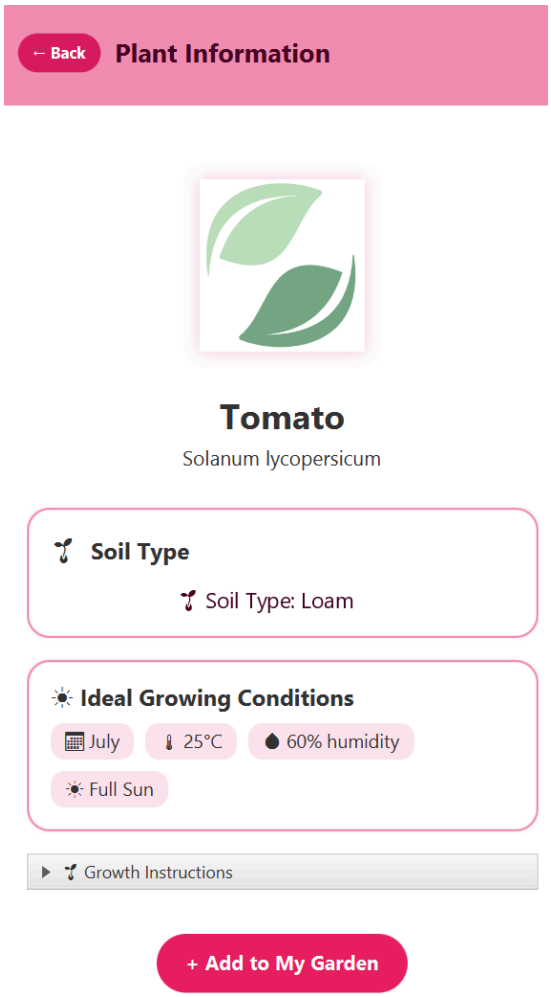

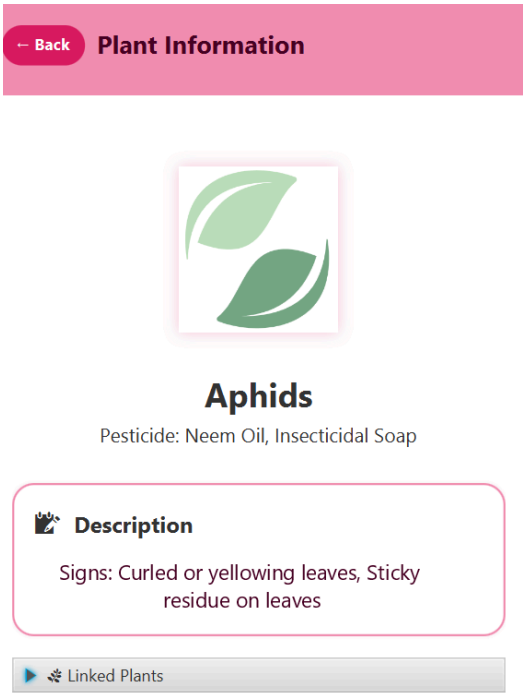

Enter a garden by clicking on the garden card
Adding garden boxes and plants are simply explained on screen as soon as you enter an empty garden.

In the **Plantipedia** or **Pestipedia** you can view more information on a plant or pest by clicking on the card for the specific entry

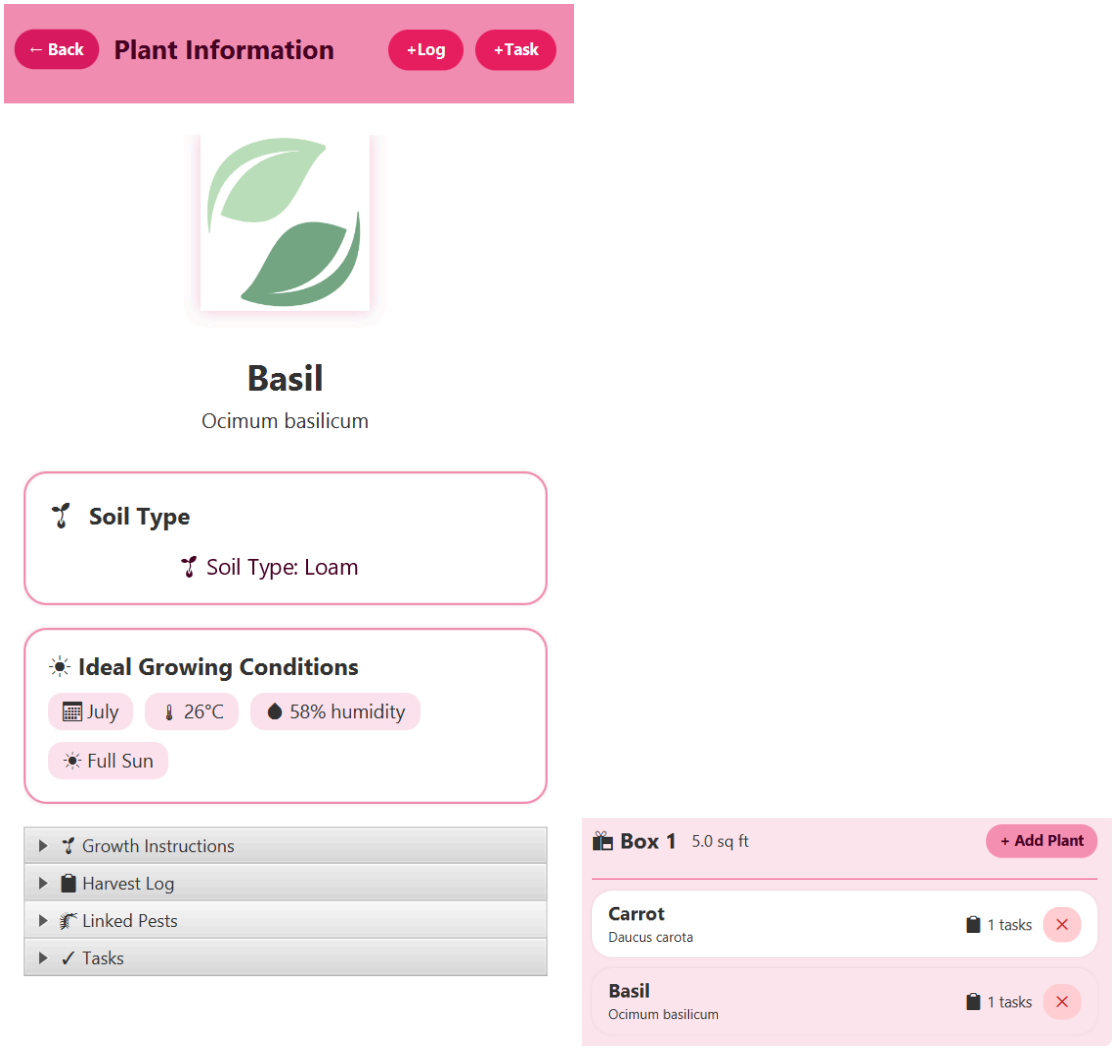

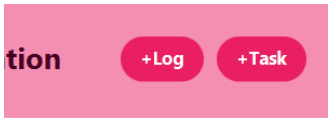

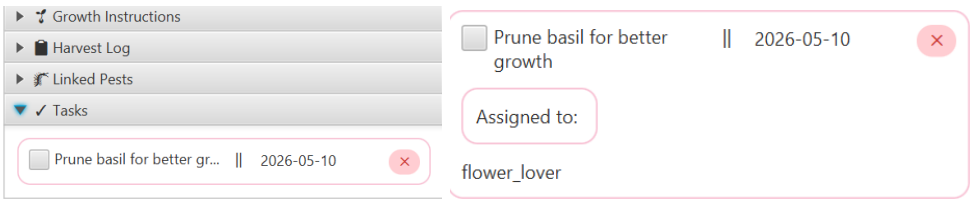

You can also view specific plant information by clicking on a plant card in a garden box

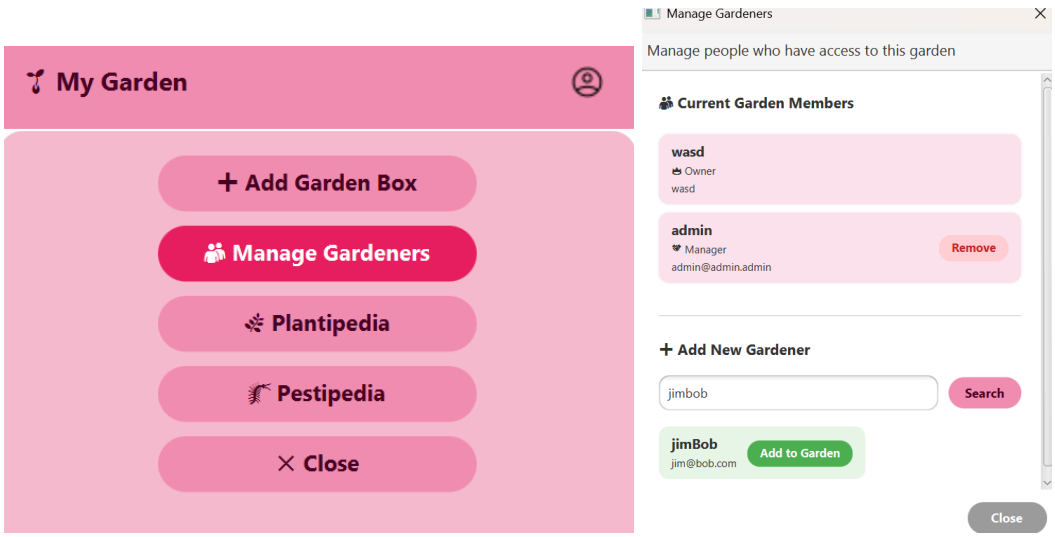

In the plant information page you can also create harvest logs and tasks through their corresponding buttons.

When creating a task you can assign users by clicking on the `assign` button. Then you can view assigned users to a task (as well as the full task description if it's long) by clicking on a task card in the tasks dropdown. Tasks can also be marked as complete or incomplete by clicking the checkbox, and deleted by clicking the red `X`.

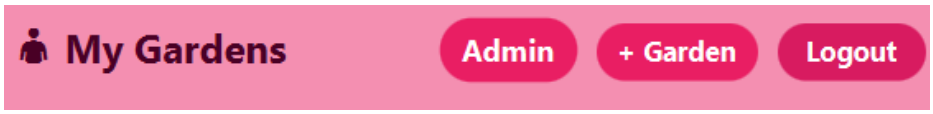

You can **Add users** to your garden through the `Manage Gardeners` option in the dropdown menu on the main garden page. The username field is not case sensitive, but it must include the whole username. An added user can leave a garden in the same place a garden owner would delete a garden.

Admin user

An admin user has the extra `Admin` button at the top of their `My Gardens` page.

Clicking this will enter admin mode, where you can add (1) , modify (2) or delete (3) plants or pests in the database. An admin can switch between the plant and pestipedia by the top right button (4).
